

ABSTRACT OF THE INVENTION

A system for providing medical providers with medical records accessible from a mobile terminal in one embodiment comprises reformatting the information in a medical record database to be used with large, ergonomic icons allowing easy transitions between
5 pages of information in the medical record. Docking stations or wireless networks may enable the mobile terminal to access the medical records. Thus, the medical provider may have bedside access to the information in the medical records to make informed decisions about treatment regimens.

FIG. 1 is a block diagram of a system for providing medical records accessible from a mobile terminal in one embodiment.
